

INDUSTRIAL PROCESS AND
COMMERCIAL VENTILATION SYSTEMS

COMPACT DESIGN INDUSTRIAL FANS

MODEL JRW

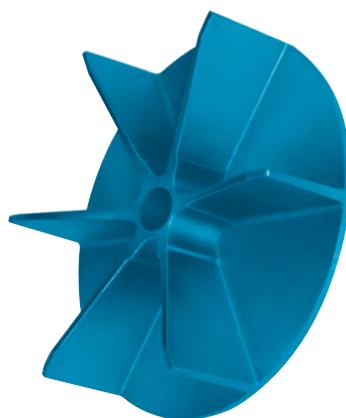

Model JRW

Compact Design

Arrangement 9
shown with optional
outlet flange

JRW Wheel

The JRW Radial Bladed Fan is designed for industrial process applications such as fume exhaust, drying, air pollution control, combustion air, pneumatic conveying, grinding and buffering exhaust, aeration, and wood-chip, textile fiber stripping and paper handling. The JRW provides maximum strength and rigidity to resist the wear and tear of heavy industrial use.

Sizes (wheel diameters)

8.75 to 15.63 inches

Performance

Airflow to 2,000 CFM

Static pressure to 14 inches w.g.

Arrangements

Available in Arrangements 1, 4, 9, 10

Choice of Wheel Material

Cast Aluminum

- Standard feature on all JRW fans
- Suitable to 250°F maximum
- Lightweight wheel suitable for gases and light particulate, such as fumehood exhaust in research lab applications

Cast Nickel/Aluminum/Bronze Alloy

- Optional feature available at extra charge
- Suitable to 600°F maximum
- Heavyweight wheel suitable for material handling applications like paper-trim, wood-chip and plastic conveying
- This wheel features ASTM alloy mixture B30-74

Typical Applications

- Fume Exhaust
- Drying
- Air Pollution Control
- Combustion Air
- Pneumatic Conveying
- Grinding and Buffering Exhaust
- Aeration
- Wood-chip, Textile Fiber Stripping and Paper Handling

The Rugged, Reliable Wheel Fan for Industrial Applications

The Model JRW fan was developed for reliability, efficiency, durability, ease of maintenance and compactness for today's most demanding industrial applications. Designed for severe duty, the Model JRW features rustproof cast nickel/aluminum/bronze or cast aluminum wheel construction, all with heavy-gauge steel housing. The result is maximum strength and rigidity to resist the wear and tear of heavy industrial use.

The radial blade design of the JRW prevents material build-up for smooth, trouble-free operation. Clogging of airflow passages is minimized by the back plate type wheel design.

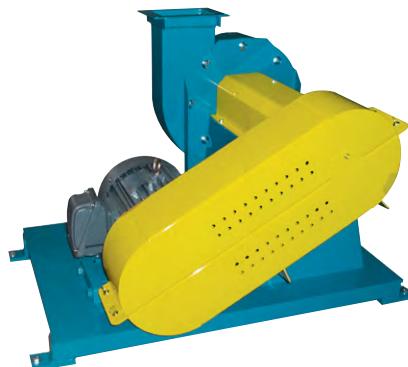

Seven models are available, in wheel sizes from 8 $\frac{3}{4}$ " to 15 $\frac{5}{8}$ ", to exactly meet your performance requirements. Both direct- and belt-driven fan types are available.

Cast nickel/aluminum/bronze and cast aluminum JRW fans offer a dependable solution for spark resistant applications.

All units are built with an adjustable steel discharge housing which can be field rotated to any of the eight standard positions. Special coatings are available for corrosion-resistance to a variety of chemicals in fumehood applications.

EQUIPMENT & ACCESSORIES

- Access Door
- Shaft Cooler
- Shaft Seals
- Inlet Flange
- Outlet Flange
- Built-in Outlet Damper
- Drains
- Inlet Screens
- Common Bases
- With and Without Isolation
- Square-to-Round Outlet
- Transition with Flange
- Outlet Screens
- OSHA Belt Guards
- Special Coatings
- Insulation Pins
- Weather Covers

Arrangement 1 shown with optional belt guard and unitary base

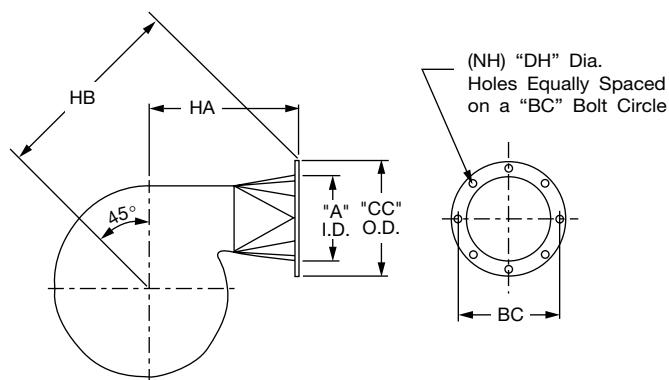

Arrangement 10 shown with optional weather cover

SQUARE-TO-ROUND OUTLET DIMENSIONS

SIZE	A	BC	CC	DH	HA	HB	NH

NOTE: Table illustrates changes in dimensions when units are ordered with optional round outlet.

ARRANGEMENTS

Arrangement 1

Arrangement 4

Arrangement 9

Arrangement 10

Arrangement 1

This arrangement has an overhung impeller with two bearings mounted on an integral pedestal base. This arrangement is suitable for belt drive with the motor separately mounted. Arrangement 1 fan pictured on the right shows optional lubrication lines, inlet and outlet flanges and spark resistant construction.

Arrangement 4

This direct drive configuration is the most compact arrangement. The impeller is mounted on the motor shaft and the motor bearing supports the wheel. With this arrangement, an integral motor base is provided and this arrangement requires less maintenance due to the absence of belts and pulleys. The motor base is adjustable to accommodate different motor frame sizes. The fan shown on the left has an optional outlet flange.

Arrangement 4VI

This arrangement is designed for vertical, inlet down mounting. It is a compact mounting arrangement used in dust collectors and scrubbers.

Arrangement 9

This arrangement allows motor mounting directly on the bearing pedestal. Fan motor slide bases are provided for field mounting of motor and drive. The unit can be shipped fully assembled and ready to run. Standard motor location is on the left for a clockwise rotation fan and on the right for a counter-clockwise rotation. Arrangement 9 fan pictured on the right shows an optional belt guard and outlet flange.

Arrangement 9F

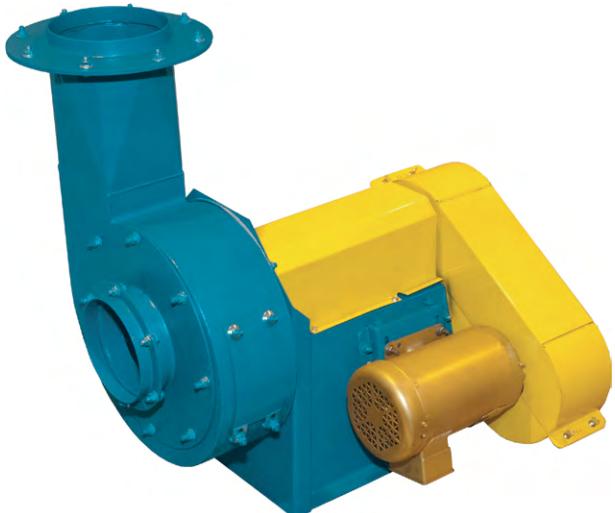

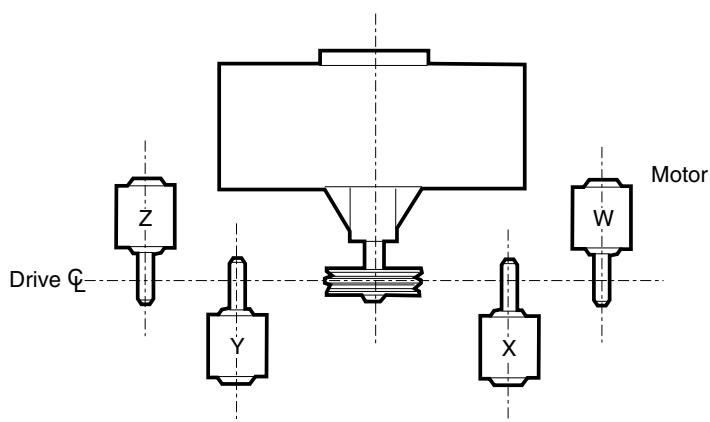

This floor mount arrangement is recommended where a packaged unit is desired but motors are too large to be mounted on the side of the bearing pedestal. In this arrangement a sub-base is provided to allow motor mounting in the horizontal position similar to an Arrangement 1. The base is suitable for direct mounting of vibration isolators or as a rigid mount. Standard motor location is on the left for a clockwise rotation fan and on the right for a counter-clockwise rotation. The fan shown on the left has optional inlet and outlet flanges.

Arrangement 10

Arrangement 10 is suitable for roof or outdoor installations. Weather covers (optional) provide complete protection for motor, shaft, bearings, and drives. Maximum motor sizes allowable in this arrangement are listed on page 15. Larger fan sizes in this arrangement or larger motor sizes for smaller fans may be available upon request from the factory. All usual accessories are available. The fan shown on the left has optional inlet and outlet flanges.

Motor Positions for Belt Drive Centrifugal Fans (Arr. 1 & 9F)

Location of motor is determined by facing the drive side of fan and designating the motor position by letters W, X, Y, or Z, as the case may be. Arrangement #9F is offered in positions W and Z.

Belt Centers — Arrangement 9F, 9 and 10

SPARK RESISTANT CONSTRUCTION

TYPE	CONSTRUCTION
A	All parts of the fan in contact with the air or gas being handled shall be made of nonferrous material. Steps must also be taken to assure that the impeller, bearings and shaft are adequately attached and/or restrained to prevent a lateral or axial shift in these components.
B	The fan shall have a nonferrous impeller and nonferrous ring about the opening through which the shaft passes. Ferrous hubs, shafts, and hardware are allowed provided construction is such that a shift of impeller or shaft will not permit two ferrous parts of the fan to rub or strike. Steps must also be taken to assure that the impeller, bearings, and shaft are adequately attached and/or restrained to prevent a lateral or axial shift in these components.
C	The fan shall be so constructed that a shift of the impeller or shaft will not permit two ferrous parts of the fan to rub or strike.

NOTES:

1. No bearings, drive components or electrical device shall be placed in the air or gas stream unless they are constructed or enclosed in such a manner that failure of that component cannot ignite the surrounding gas stream.
2. The user shall electrically ground all fan parts.
3. For this Standard, nonferrous material shall be any material with less than 5% iron or any other material with demonstrated ability to be spark resistant.
4. The use of aluminum or aluminum alloys in the presence of steel which has been allowed to rust requires special consideration. Research by the U.S. Bureau of Mines and others has shown that aluminum impellers rubbing on rusty steel may cause high intensity sparking.

The use of the above Standard in no way implies a guarantee of safety for any level of spark resistance. "Spark resistant construction also does not protect against ignition of explosive gases caused by catastrophic failure or from any airstream material that may be present in a system."

TYPICAL SPECIFICATIONS

Furnish and install as shown on the plans and specifications, Twin City Fan & Blower Model JRW Industrial Fans.

FAN HOUSINGS — All housings shall be continuously welded and of heavy-gauge steel suitably braced to prevent pulsation. All units shall be built with adjustable discharge housing which can be field-rotated to any of the eight standard positions.

FAN WHEELS — The wheels shall be cast nickel/aluminum/bronze or cast aluminum. JRW radial-bladed backplate type construction is suitable for long, stringy, fibrous materials, or solid particles.

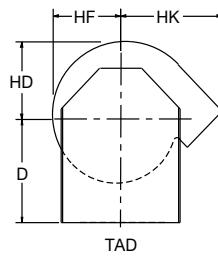

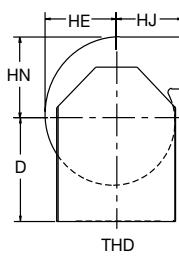

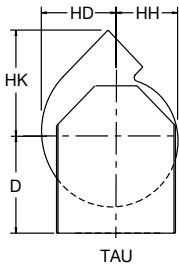

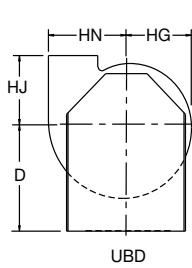

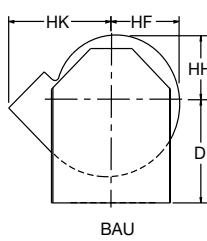

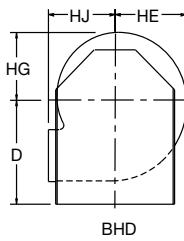

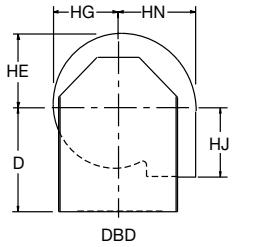

BEARINGS — Bearings on belt drive units shall be sized and selected to have a minimum average life of 200,000 hours based on AFMBA rating designations. The bearings shall be pillow block type, heavy-duty anti-friction, self-aligning ball bearings designated for air-handling (AH) duty.

SHAFTS — Shafting shall be per AISI C-1018, 1040, or 1045 hot rolled steel, accurately turned, ground, polished and ring-gauged for accuracy. Shafts shall be sized so that their first critical speed will be at least 1.35 times the maximum operating speed.

ACCESSORIES — Accessories, such as outlet dampers, companion inlet and outlet flanges, inlet bells, shaft guards, etc., shall be provided by the fan manufacturer maintaining one-source responsibility.

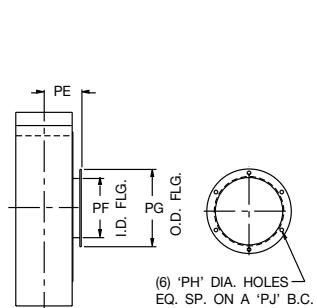

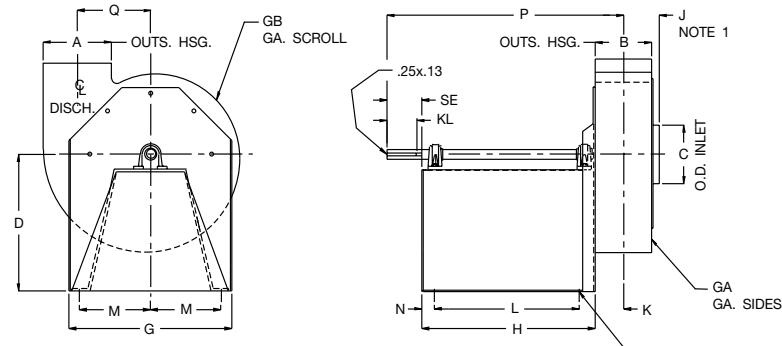

FACTORY TEST RUN UNITS — Prior to shipment, all fans shall be completely assembled, test run and trim balanced as a unit at operating speed or at the maximum allowable RPM. Balance shall be taken by electronic type equipment, and records shall be maintained of the readings of axial, vertical, and horizontal direction on each of the bearings. A written copy of this record shall be available upon request by the customer.
